

## The Adlerac VCR Rack

The Adlerac VCR Rack was designed in response to the upsurge in the security market. These cabinets are especially designed for surveillance equipment and offers smart equipment support. The Racks are produced in the popular broadcast brown but additional colours are also available upon request. This popular rack conforms to the 19" TIA standard. Its frame is constructed from toughened light weight extruded aluminium. Standard with the rack is a circuit protected power supply with room for a UPS. Equipment is supported on four punched profiles and equipment support rails are used to hold the equipment. Since the equipment is required to run 24/7 shifts additional 6 way fans are recommended for adequate cooling. Extremely popular in all cinema theatres, broadcast studios, casinos, banks and shopping malls
